The Haunting of Nanna at the Shepherds Bush Empire, London, UK Fri, Apr 26 @ 7:00 pm Do you believe in ghosts? If so, why do we never see them? Presented by the company that brought you The Unbelievables, The Haunting of Nanna is a truly terrifying performance of the most famous ghost story in history, in a modern setting, with a terrifying cast of comedians and dancers. After being spooked by that unforgettable memory, we're not sure that we ever want to believe in ghosts again. The present invention relates to a system, method and apparatus for the economic and efficient production of metal castings, in particular, it relates to a method and apparatus for producing metal castings which are highly reproducible and which have a high production capacity and high yield. Metal castings, in particular high-precision metal castings, typically have a complex shape and, for example, a complex curvature or unevenness in the surface. For this reason, these castings require, for example, an expensive final machining process in order to improve the surface conditions. In the metal casting, however, the surface condition is generally not of great significance. For these reasons, a metal casting which has been once produced is reused, for example, as a tool blank, as a jig, or as a manufacturing device or, for example, in the fabrication of a new product. The problem lies in the fact that, in order to reuse the casting once produced as a tool blank, jig, or other device, it is necessary that the casting once produced be not only an accurate casting, but also a high-quality casting. For this reason, it is desirable that a high-quality cast can be produced at a high speed with a high production capacity and a high yield. In the production of metal castings, it is desirable that the equipment be arranged in such a way as to make the work cycle of the equipment shorter, to increase the casting speed, and to decrease the running costs. However, in the case where the metal is poured into a mold
